Q.7. Shrinkflation occurs in an economy when there is a/an:

- A) increase in aggregate demand B) rise in cost of production
C) increase in aggregate supply D) decrease in cost of production

Answer : B

- ✓ As input prices, which were benign for a few quarters, turn inflationary, the spectre of shrinkflation looms large within the fast-moving consumer goods (FMCG) segment.
- ✓ It occurs when goods shrink in size but consumers pay the same price. It occurs when manufacturers downsize products to offset higher production costs but keep retail prices same.
- ✓ It is basically a form of hidden inflation.
- ✓ Instead of increasing the price of a product, producers reduce the size of the product while maintaining the same price.
- ✓ The absolute price of the product doesn't go up, but the price per unit of weight or volume has increased.
- ✓ Reasons: The reasons for shrinkflation are rising production costs and market competition.
- ✓ Impacts:
- ✓ Shrinkflation runs the risk of turning customers away from a product or brand if they notice they are getting less for the same price.
- ✓ Another downside of shrinkflation is that it makes it harder to accurately measure price changes or inflation.
- ✓ The price point becomes misleading since the product size cannot always be considered in terms of measuring the basket of goods.
- ✓ What are Fast-Moving Consumer Goods?
- ✓ These are products sold quickly and at a relatively low cost. The FMCG industry is characterized by high-volume sales, quick inventory turnover, and various products catering to consumer needs.
- ✓ These goods include essential everyday items such as food and beverages, toiletries, cleaning supplies, and other low-cost household items.
- ✓ They have a short shelf life because of high consumer demand (e.g., soft drinks and confections) or because they are perishable (e.g., meat, dairy products, and baked goods).
